

Parent Feedback on TeenTech At Home

That was the best and most exciting education that we have had for months. Really inspiring and brilliantly put together - thank you It was fantastic for my daughter to get feedback direct from everyone, to see her face light up as Suzie, Dallas & Ali commented on her design was wonderful. It really gave her a boost and made her feel her efforts and thought behind her design were taken seriously.

After watching the live session on Wednesday my son was inspired to design his game and came up with his idea in less than a day and submitted it. We have never seen him so driven. He got a mention in the show which really made his day. With GCSE cancelled he needed something like this to spur him on. Now he is trying to develop his games idea to a game.

Thank you so much for this event Amy absolutely loved working on City of Tomorrow! In fact, I don't think I've ever seen her so excited by a project. She was certainly inspired. I thought it worked really well online too. Amy's teacher has now told her class about it My daughter really enjoyed the session and talked a lot about her idea. These sessions are really useful as there is not really enough school work set and it's not differentiated

Dawn Helsby , STEM co-ordinator at North Warwickshire and South Leicestershire College, reflected on the wider virtual TeenTech At Home offer not only as a teacher but as a parent:

You have absolutely made my kids year. This whole idea online offer is amazing, so well thought out and is executed seamlessly. Such a great idea I will be sharing on FB and to all my friends for their children to get involved over the coming weeks. The last few weeks have been challenging with trying to work and home schooling, this project actually brought my children closer, it was nice to hear them giggle and help each other instead of argue and fight and gave them something to get on with themselves and not need help'.
